60 years with Policrom

The best press packing for each application.

Polipack PS

Paper press packing is used when there is a need for a relatively soft and pliable packing medium. This is typically under a printing blanket. Polyester is used when the packing needs to be a little tougher, as it is typically under the plate.

Sample Goes Here

If you would like to order a sample please contact us at:

Polipack AA

This product is an adhesive back Polyester for our customers who always use the same packing thickness and require fast plate changes.

Polipack NA

This product is a non-adhesive press packing for our customers who frequently change the packing gauge.
